

PERFECT FOR TODAY'S ONSITE BUSINESS

FUJIFILM order-it professional 10 software

DISCOVER ORDER-IT 10 SOFTWARE

Modern user interface

The user interface is optimised for touchscreens – now with smooth response to swipe gestures.

Its appealing design with large product images attracts customers and provides a pleasing user experience.

order-it live

- Managed updates
- Live licensing
- System status
- Problem reporting

Optimum support and live licensing

Your online kiosk benefits tremendously from order-it live. Easily manage your order terminals to ensure a smooth kiosk operation.

Support tools for today's connected world: Live licensing, system status and managed updates for your kiosks and attached printers are supportive tools of order-it live that enable an easy kiosk supervision.

Diverse product portfolio

Order-it 10 software offers a diverse product portfolio that is oriented towards current and future trends for instore or wholesale lab production. New products can be easily added to the existing portfolio.

Split and Shuffle prints are examples that work especially well with smartphone pictures.

Valuable marketing tools

During idle times order-it 10 can display advertising screens that you can create. Each screen can include a link that takes the consumer directly to the promoted product.

You can easily set up promotions including special pricing or percent discount to attract consumers and increase sales.

Order-it mobile app

With order-it mobile, printing smartphone pictures is super easy. Your customers simply transfer their favourite pictures to the order-it kiosk and print.

Includes hundreds of templates

Many of the attractive templates target the younger consumer segment and inspire them to personalise their photo products.

Order-it 10 also offers you tools to create your own templates.

Original image

Optimised image

FUJIFILM Image Intelligence®

This cutting edge image optimisation tool automatically ensures excellent image quality and turns even problematic shots into beautiful images.

Various output connectivity for instore production and more

The Instore Mass Production (IMP) server supports the connection of ten or more order-it kiosks to central in-store output devices and transforms your store into a production location.

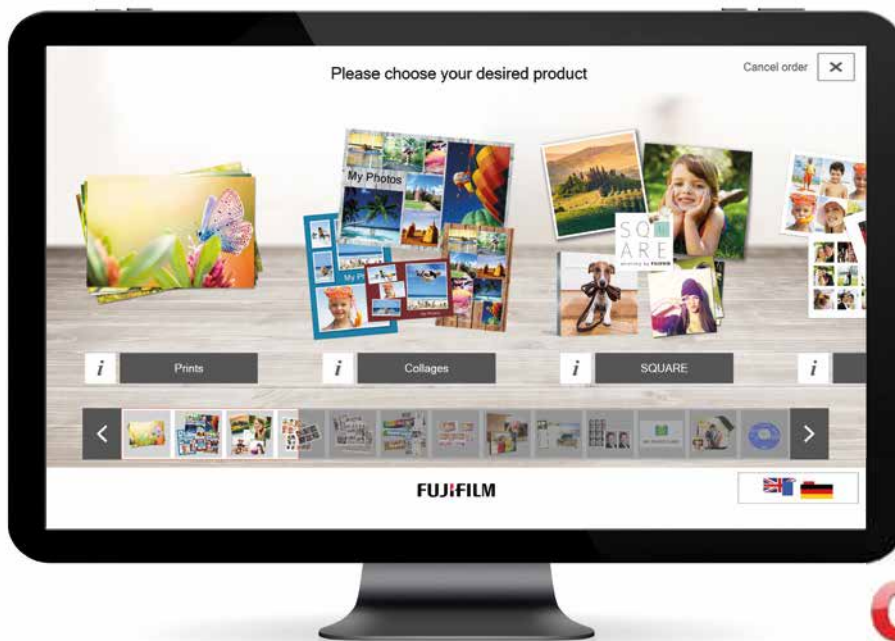

Order-it 10 connects to many printers:

- **Frontier DE100/DX100** for photos, calendars, banners and more
- **Xerox Phaser** for greeting cards
- **Epson Large Format Printer** for posters and canvas and
- **Sheet printer** for photo books and more.

Order-it 10 can also be connected to a wholesale lab to expand the variety of personalised photo products available to your consumers.

YOUR IMAGING BUSINESS STARTS HERE

Order-it 10 software is the key to your successful imaging business. It attracts with an appealing user interface, a large product portfolio and various design options. Order-it 10 solution can be configured to perfectly meet your business needs, supported by valuable marketing tools, product and workflow configurations.
